

Construction Safety and the OSHA Standards: Downloads What's New in Trades

The Occupational Safety and Health Administration (OSHA) is responsible for ensuring the safety of workers in the United States. OSHA has developed a number of standards that construction companies must follow to protect their workers from hazards. These standards are constantly being updated to reflect the latest safety research and technology. In this article, we will discuss the latest changes to the OSHA standards and what they mean for construction companies.

New Standards for Fall Protection

One of the most significant changes to the OSHA standards in recent years is the new requirements for fall protection. These new requirements are designed to prevent workers from falling from heights and suffering serious injuries or death. The new standards require that construction companies use guardrails, safety nets, or personal fall arrest systems to protect workers who are working at heights of six feet or more.

New Standards for Electrical Safety

OSHA has also updated its standards for electrical safety. These new standards are designed to protect workers from electrical hazards, such as shocks, burns, and electrocution. The new standards require that construction companies use proper electrical equipment and wiring, and that they train their workers on electrical safety.

New Standards for Hazardous Materials

OSHA has also updated its standards for hazardous materials. These new standards are designed to protect workers from exposure to hazardous materials, such as chemicals, dust, and fumes. The new standards require that construction companies develop a hazardous materials safety program, and that they train their workers on hazardous materials safety.

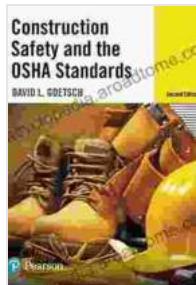

What the New Standards Mean for Construction Companies

The new OSHA standards have a number of implications for construction companies. Construction companies must now comply with the new standards in Free Download to avoid fines and penalties. Construction companies must also train their workers on the new standards to ensure that they are following the proper safety procedures.

The new OSHA standards are designed to protect construction workers from hazards and prevent injuries and deaths. Construction companies must comply with the new standards to ensure the safety of their workers.

The OSHA standards are constantly being updated to reflect the latest safety research and technology. The new standards for fall protection,

electrical safety, and hazardous materials are designed to protect workers from hazards and prevent injuries and deaths. Construction companies must comply with the new standards to ensure the safety of their workers.
